

Education

BACHELOR OF TECHNOLOGY (Artificial Intelligence & Data Science)– IIMT College of Engineering – Greater Noida

Summary

Results-driven Artificial Intelligence & Data Science graduate with a solid understanding of data analytics, statistical analysis, SQL, Python (Pandas, NumPy), Excel, and Power BI. Capable of collecting, cleaning, analyzing, and visualizing data. Passionate about transforming data into actionable recommendations and committed to continuous learning in analytics. Looking to begin a career as a Data Analyst in a growth-oriented organization.

Skills

Python

Libraries: pandas, matplotlib, ggplot2, BeautifulSoup2, re, os

R Programming

Packages: dplyr, shiny, ggplot, tm, tidyR

Excel

Tools: Pivot Table, Pivot Chart, VLOOKUP, HLOOKUP, VBA

Power Bi

Tools: DAX, Power Query, Dashboards, Charts

SQL

Software: MySQL, PostgreSQL, Oracle Database, SQL server

Tableau

Importing Data, join, union, filter, calculated fields, charts, dashboard.

Projects

E-COMMERCE MANAGEMENT SYSTEM (MYSQL)

(https://github.com/Nazim-Khan-2315/MySQL_Project)

- Create Database
- Create Tables
- Inserting data
- Queries (Update, Modify, Join, Aggregate functions (count, Average, sum, max), group by, order by, limit, view, index, etc.)

DATA PROFESSIONAL SURVEY DASHBOARD (POWER BI)

(https://github.com/Nazim-Khan-2315/Power_BI_Project)

- Created a dashboard with **Power Bi**
- Data Analysis Expression
- Charts (Bar, Column, Tree map, gauge, Donut, pie, etc.)
- Drill Down mode
- Slicers (Normal, Button, Input, List)
- Power query,
- Relationships

DATA ANALYSIS PROJECT (PYTHON, PANDAS, MATPLOTLIB, NUMPY, SEABORN)

(https://github.com/Nazim-Khan-2315/pandas_project/)

- Created project in jupyter notebook
- Data cleaning by pandas
- Data filtering and ordering
- Data grouping and aggregating
- Data indexing
- Data visualizations

SALES PROJECT (EXCEL)

(https://github.com/Nazim-Khan-2315/Excel_Project)

- Pivot Table, Chart, Filter, slice
- Conditional formatting
- function (sum, count, average, max, min, etc.)
- VLOOKUP, HLOOKUP

PROJECT (TABLEAU)

(https://github.com/Nazim-Khan-2315/Tableau_Project)

- charts
- calculated fields
- Dashboards
- Filter

STUDENT RESULT ANALYSIS (R)

(https://github.com/Nazim-Khan-2315/R_Project)

- Data cleaning
- Data manipulation
- Data analysis
- Data visualization

BANK LOAN ANALYSIS (PYTHON, PANDAS)

(https://github.com/Nazim-Khan-2315/pandas_project/tree/main/Project_Bank_Loan_Analysis)

- Analysed a bank loan dataset using **Python (Pandas)** to evaluate loan applications, funded amounts, repayments, interest rates, and debt-to-income (DTI) metrics.
- Built key business KPIs, including **Total Loan Applications, Total Funded Amount, Total Amount Received, Average Interest Rate, and Average DTI**, to monitor portfolio performance.
- Performed loan portfolio analysis by categorizing **Good Loans (Fully Paid/Current)** and **Bad Loans (Charged Off)** to measure loan quality and default trends.
- Conducted exploratory data analysis (EDA) to identify trends across **issue date, state, loan term, employment length, loan purpose, and home ownership** using group-by operations and aggregations.
- Created interactive visualizations using **Matplotlib and Plotly**, including line charts, bar charts, pie charts, and treemaps, to communicate lending patterns and regional performance.
- Generated business insights on customer borrowing behaviour, repayment performance, and loan distribution to support data-driven lending and risk assessment decisions.

CUSTOMER SHOPPING BEHAVIOUR ANALYSIS (PYTHON(PANDAS), POSTGRESQL, POWER BI)

(https://github.com/Nazim-Khan-2315/Customer_Shopping_Behaviour)

- Analyzed a customer shopping dataset containing **3,900 transactions and 18 features** to identify purchasing patterns, customer segments, and product preferences.
- Performed data cleaning and preprocessing using **Python (Pandas)** by handling missing values, standardizing column names, creating derived features, and transforming purchase frequency into numeric.
- Improved data quality by imputing missing review ratings with category-wise median values and removing redundant columns to prepare an analysis-ready dataset.
- Loaded the processed dataset into **PostgreSQL** using **SQLAlchemy** and executed SQL queries to perform business-focused analysis.
- Wrote SQL queries to analyze revenue by gender, identify high-spending discount users, compare subscriber vs. non-subscriber spending, and evaluate shipping performance. Wrote SQL queries to analyze revenue by gender, identify high-spending discount users, compare subscriber vs. non-subscriber spending, and evaluate shipping performance.
- Delivered actionable business recommendations, including subscription growth strategies, loyalty program improvements, discount optimization, and targeted marketing based on customer behavior analysis.
